Thank you Chris for your swift response. I also noted that the opinions differed considerably. So it is difficult to please everybody and I understand the difficulty. I also understand your wish to build upon this years experiences.

I'll pass your comments on to the teaching committee and we will discuss them at our next meeting which will take while.

Best Wishes Preben

Dear Preben

Thank you for your email. We (Lars, Dan and I) had already discussed the Theoretical Exercises with the BAB students when we met them for an evaluation at the end of the course. Since then we have also discussed the Exercises internally. We note and appreciate the comments from the students, although we also note that there is no consistency; some prefer multiple choice, some exam essay type, others the running exercises. The point of agreement is that enough time should be allowed. In this regard, it is important to recognize that (once again) there is inconsistency in student preferences; some prefer to complete the exercises during the time allotted during the teaching day, whereas others (quite a high proportion) prefer to take the exercise home and work on it there (effectively taking "time off" from teaching hours). We always try to be flexible and accommodate these different preferences. During the time that we have taught BAB we have changed the format of the Theoretical Exercises many times (most years) in an effort to find a single "recipe" that suits all. It cannot be done. This year we allocated more teaching time to Theoretical Exercises than before, and we are of the view that this structure needs at least one more year to prove itself. Hence, the emphasis for continued improvement next year will be on refinement of the individual exercises. As part of this process, the Course Information handed out at the start of next year's Course will include a fuller description of the type of exercise(s) that will be used on each teaching day. In this way, the students will be better prepared and will obtain increased benefit from the exercises. We are very committed to continual improvement, so Lars, Dan and I will continue our internal discussions and revert to you again if we have further to add.

Best wishes

Chris

Dear Chris:

On behalf of the teaching committee, I would like you to discuss the evaluation of BAB with the other teachers and provide us with a response to those of the comments that have a recurring nature.

We are aware that the low score of the project work is an artifact.

We specifically note that the theoretical exercises have received a number of comments and look forward to learn how they can be further improved.

Best wishes - Preben

Dear Rikke

Thank you for the evaluation. Unfortunately although I had asked last year that the question about "project work" be omitted, it has appeared again. There is no project work in this course. How do I have that question removed please, as it is misleading?

In addition to BAB, I am also Course responsible for SLEK10189U Meat and Milk Production. I have not received an evaluation for this other Course. Could you tell me if I will receive one soon?

Thank you for your help.

BW

Kære Christopher Harold Knight.

Hermed fremsender jeg hermed på vegne af chefkonsulent, dr. med. Jørgen Hedemark Poulsen, opgørelsen af kurset SASB10131U Basic Animal Biology, blok 2, efterår 2013.

Jeg vil gøre opmærksom på, at besvarelsesprocenten er rimelig på 49 %.

Opgørelsen fremsendes i to kvalitative versioner; en fortrolig version og en ikke-fortrolig version, samt en rent kvantitativ version. Sidstnævnte kan distribueres til kursets undervisere og den vil efter studieårets afslutning blive publiceret.

I dokumentet ”fortroligt” medfølger en række kvalitative kommentarer fra de studerende, som kan berøre navngivne enkeltpersoner. Relevante kommentarer om undervisere bør – i overensstemmelse med ’Persondataloven’ - drøftes enkeltvis med de pågældende. Det er vigtigt at være opmærksom på, at der i den ”ikke-fortrolige” *kvalitative* version undtagelsesvis vil kunne forekomme personfølsomme kommentarer (såfremt respondenterne begår fejl). Normalt vil denne version kunne distribueres til kursets undervisere. Hvis den ”fortroligt” markerede kvalitative version *ikke* indeholder personfølsomme kommentarer, kan den ligeledes distribueres til hele undervisergruppen.

Har I kommentarer eller spørgsmål til evalueringen, er I meget velkomne til at kontakte mig. For mere generelle drøftelser om evaluering kan I også kontakte chefkonsulent, dr.med. Jørgen Hedemark Poulsen (j.hedemark@sund.ku.dk).

Med venlig hilsen
